RE: Shiloh Church Road Site
Update on EPA Activities

Dear (b) (6),

In 2018, EPA sampled drinking water wells as part of an environmental assessment for the Shiloh Church Road Site (Site) located in the area of Shiloh Church Road and LP Bailey Highway. As part of this assessment, EPA sampled (b) (6):

(b) (6)

(b) (6) wells were tested for volatile organic contaminants and metals. None of the contaminants of concern were detected in your drinking water. Furthermore, no substances were detected above drinking water standards for public systems.

EPA does not plan any further action on your (b) (6). EPA will begin cleanup activities at the Site next week. I am enclosing a flyer with some additional information regarding EPA's actions.

EPA appreciates your cooperation in the assessment. If you have any questions, please contact me at any time at (804)-337-3049.

Sincerely

Christine Wagner, OSC
EPA Region III
